

Lightweight 10-in-1 Multi Tool

Tool Features:

- 2,3,4,5,6 Hex Keys
- Phillips and Flathead Screwdrivers
- 14 & 15G Spoke key slots
- T25 Torx Head key
- The above tools are chrome plated (CP) chrome vanadium (Cr-V).
- The tool body arms are made from extruded aluminium.

Hex Wrench Use:

- NB: Some 8mm Hex key applications, such as fitting pedals etc, are high torque. Please note that the hollow 8mm adaptor bit may break if excessive force is used as it is intended for roadside and smaller repairs only and not to replace a workshop quality tool.
- Fully insert the CNC-Machined head of the hex key to the full depth of the hex key bolt head recess. This is to avoid foreseeable damage to the tool and/or the bolt if slippage occurs.

Torx Key Use:

- Please ensure the Torx key bit is fully inserted in a Torx bolt. The bolt or the tool may be damaged if the Torx bit head doesn't have full contact with the splines of the Torx bolt when load is applied.
- The Torx key bit *should not be used in place of a Hex key bit* even if it fits into the hex key bolt recess as *this will result in damage to the tool and/or the bolt upon the application of load.*

Troubleshooting:

- If you encounter mechanical difficulties, it is recommended that a suitably certified professional bike mechanic is consulted for assistance.
