

Caring for your JRC Flecked Beanie

- Your newly purchased beanie is made of 100% acrylic.
- Lukewarm water is the best way to wash your beanie as it helps the hat keep its shape.
- Add a mild detergent - approximately 1x teaspoon per 1 gallon of water.
- Put the hat in the water, gently squeezing and releasing it to absorb the soapy water for about 5 minutes.
- Rinse thoroughly in cold water.
- Squeeze the excess water out by gently pressing it against the side of the sink/bucket/container.
- Do not wring out your beanie as this will destroy the shape and elasticity of the hat.
- Leave to dry in a well-ventilated space but don't let it hang when wet.
